

Avenza® Maps: How to directly load GeoPDF maps to the App

Many GeoPDF maps are available to load in the app directly from the [Avenza Map Store](#), such as [USFS MVUMs](#) and [BLM Travel Maps](#). However, more maps can be obtained from third party sites (EG: [IDL Recreation Maps](#)). Or, you can create custom maps to your liking on IDPR's [Summer Trails web app](#), then import to the Avenza app manually.

(See the end of this document for app store QR codes or links for a quick way to install the Avenza® Maps app.)

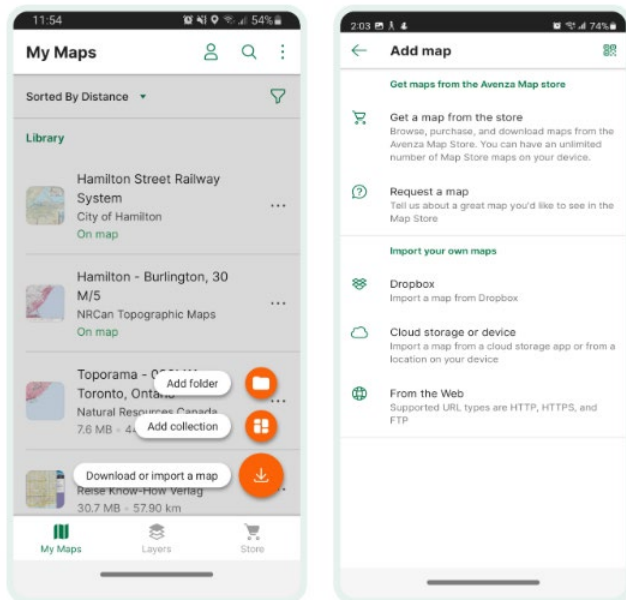

Installing downloaded maps in the Avenza® Maps app:

Usually, your device will automatically give you the option to import and open a just-downloaded GeoPDF map in the Avenza app (if installed). Otherwise, such as if you created a custom map on the device, or you received a map by e-mail and saved it to your device, use the following method to manually install the map:

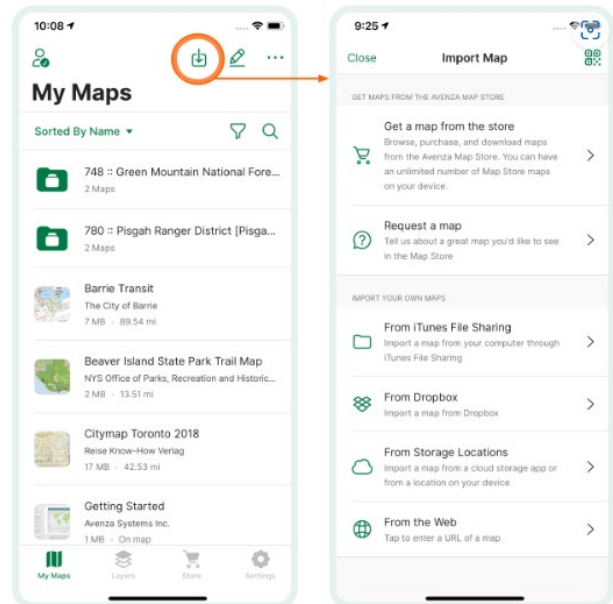

On the *My Maps* screen, tap  for Android, or  for iOS, followed by "Download or import a map."

Tap either "Cloud storage or device" (Android) or "From Storage Locations" (iOS) to locate the GeoPDF to install.

Android

iOS

Tip: If an imported map does not at first show up in your *My Maps* list, try cycling through your open apps and back to Avenza®. Or, close and reopen the Avenza® app to refresh the list.

Loading a map using a QR Code

On the *My Maps* screen, tap  for Android, or  for iOS, followed by "Download or import a map."

1. Tap the QR Code icon in the top right corner of the "Add map" (Android) or "Import Map" (iOS) screen.
2. If this is the first time you are using the app, you maybe asked to allow app access to the device camera.
3. Scan the QR code and follow the remaining instructions to complete the map loading process.

Need the Avenza® Maps App? Install from Google Play or Apple Store by scanning a QR code:
