

Idaho Trails App: Search Tool

The Search tool in the Idaho Trails App appears and functions nearly the same for either PC or mobile versions.

When you enter a placename or a keyword in the search box, you will see suggestions as you type.

For best results, enter "Idaho" after your search term. Some geographic names such as lakes and peaks will yield better results than other search terms, so experiment with various terms. For example:

Clicking/tapping on the magnifying glass icon will help narrow the search results. Try any of the results and return to the list to try another if the first result is not the intended location.

Click the **X** to clear any search term and start over.

Search on a geocoordinates term (latitude/longitude; Y-X):

If copied and pasted in from another source, remove any extraneous text from the search term. For example, delete "Degrees" if included in a pasted-in string.

The tool will convert different geocoordinate formats such as Decimal Degrees, or Degrees, Minutes, Seconds.

Click/tap the magnifying glass to convert to a "Y: X:" pair, then click/tap the "Y: X:" result to zoom to the location.
