

Using the Add Data Widget by *File* or *Search*

To add a track file such as a .GPX, click the **Add Data** widget button, the **File** tab, and then click **Browse**.

Select the file to add from the provided dialog. The map will zoom to the track location when added. To remove any added layers, click **LAYERS** in the Add Data dialog then delete the items no longer wanted.

To add a layer from an external source by **keyword search**, click the **Search** tab and enter a term such as "mvum" and select the desired result to add. Turn any added track or layer off and on through check boxes under the Layer List.
