

Use the Find My Location widget

When the application starts, the **Find my location** widget is automatically enabled to access your physical location.

The tool button will appear as one of these two versions in the upper left area of the browser window in most cases.

Clicking or tapping **Find my location** zooms the map to your current location.

Tips:

When using the app on a mobile device, you may need to activate Location Services.

On a PC, you might get an error message. The error is often caused by the browser's security. Check the browser's pop-up settings to allow sharing your location. Click **Yes** to find your location.
